

ENVIRONMENT POLICY OF MERQUINSA, S.L.

The conservation and protection of the Environment forms part of our responsibility in the development of our industrial activity, and implies the acknowledgement and compliance with the environmental legislation in force, as well as with any other environmental requirement that the organization has subscribed with public or private entities.

The awareness of the risk the raw materials used may pose to people and the environment, as well as that of the reaction, intermediate, and end products, has been and will be taken into account by existing grades, and new ones in their developing phase, respectively, so as to minimize the effects thereof on the environment.

From the beginning one of our aims will be to prevent, control and minimize the effects of our investigation, design, activities, products, services, building and maintenance of our processes and facilities on the environment.

The basis for the establishment of the company's environmental aims will be the optimization of natural resources, as well as the control of atmospheric pollution, and especially, the minimizing of spills and waste as the main environmental aspect of MERQUINSA's activities.

The commitment of MERQUINSA's management and personnel depending thereof, is to progressively comply with the established environmental aims.

MERQUINSA understands that the respect for the environment must be integrated in all aspects of its activity, and must be based on a continuous improvement whilst providing the means to fulfil and quantify the established aims.

Continued training of employees whose activity may have a relevant effect on the environment, will play a major role in allowing for the comprehension and acknowledgement of the environmental aims.
